RE:
OBJET:

(FORM CASE)

- Sighting of U.F.O.
27 SEP 68

27 SEP 68

1. At approx. 10:30 PM of the above noted date, (2) reported to this office, stating that he had just observed a U.F.O. He stated that he had first seen it approx. 5 miles north of Anole, Manitoba on P.W. #12 and followed him all the way back to Causejour. A patrol was made to the location where it was last seen. I was accompanied by Sgt. Mel TOWN and (2) to the location and scanned the area for any signs of this unidentified light. Our patrol to this area had met with negative results and we made a further patrol to the highway, which had also met with negative results. During our patrol a number of cars were stopped and the occupants were questioned in regards to this light, these enquiries had also met with negative results.

2. A patrol was then made back to the office where a statement was obtained from (2) and is attached as appendix 1.

27 SEP 68

3. On the above noted date a number of night patrols were conducted in this area for any signs of any U.F.O's, but these patrols proved to be negative. During the night the following message was sent to Winnipeg Sub/Div. for the information of W.R.C. Meteor Center the Commissioner and Conforced:

Tulax number for W.R.C. Meteor Center #113131

Date and Time: 27 SEP 68, at approx. 10:20 PM Central Time

Conditions: Cloudy

Identification of observer: (2)

Occupation: (2)

Location of observer at time of Sighting: In private car approx. 5 miles north of Anole, Manitoba on Hwy. #12 and #15

Identification of other observers: (2)

Description: Shadows of a flat round object with turning lights, greyish in colour, approx. 10 to 15 yards in diameter. Altitude estimated at approx. 40 to 50 feet. Followed telephone lines.

Duration: Approx. 20 to 25 minutes, followed private car for the distance of 20 miles.

4. During the time (2) was in our presence he seemed to be very calm. With regards to his reliability, Mr. is not known by any members of this detachment, therefore his reliability can not be stated. 0045

5. Extra copies attached for distribution. 2/04

RE OBJET:	PAGE
APPENDIX "A"	PROPERTY OF RCMP - THIS POLICE REPORT IS SUPPLIED TO YOU BY THE RCMP FOR YOUR INFORMATION ONLY. IT IS NOT TO BE REPRODUCED OR USED IN ANY OTHER MANNER OR FOR ANY OTHER PURPOSE WITHOUT THE AUTHORITY OF THE RCMP.

STATEMENT OF:

②

Taken 11:10 PM 27 SEP 67

I was proceeding north of Anola, Manitoba, and approx. five miles north my wife had noticed a light in the sky, I didn't believe her at that moment, then I looked again and it was a big greyish coloured light just above the car by the telephone lines. I proceeded on towards Beauséjour and this light was still following me. I turned off my lights and looked up again at it and it was still there. I then proceeded into Beauséjour which was approx. 15 miles and it stayed with me all the way into town. When I got to the outskirts of town I stopped the car again and got out to look at it, and this light proceeded between two houses and remained there. I observed this light which was approx. 15 to 20 yards away and about 30 to 50 feet in the air. It had then started to move away very slowly and then disappeared behind the houses. This is when I came back to the car and proceeded to your office to report this matter.

RE: OBJET: ② - Sighting of Unidentified Object.
5-8-68.

- a) Sighted on 5 August 1968 at 9:20 PM. ② reported sighting on the 6th August 68. A detailed report was received on the 13th August 1968.
- b) The sky was very heavily clouded at the time of the sighting. ② was flying below the ceiling. Visibility was approximately ten miles.
- c) The observer was identified as: ②
- d) The observer was located 7 to 8 miles S.W. of Oakburn, Man., when he sighted the U.F.O. The object was approximately 1 mile west of ② at this time.
- e) Another observer of the U.F.O. was ② of the same address.
- f) There was only one U.F.O. sighted at this time. It resembled an object, being approximately 50 feet across and about 10 feet thick. The object was brilliant orange and did not look like it was burning. The object seemed to hover in one spot and then it moved off quite quickly to the west. ② was flying at 1000 feet off the ground and sighted the object at the same altitude as he was flying.
- g) ② and his son saw the object for a good 5 minutes and possibly close to 10 minutes. The object then headed due west, disappeared possibly going through a cloud then reappeared and then went out of sight.
- h) This is the first U.F.O. that ② has seen. He has been flying for six months and does not wear glasses. The object seemed to be hovering over a field when it was first observed. ② could not tell what the object was powered by. ② estimated the distances by road allowances.

V 2000-4 (D Ops)

Canadian Forces Headquarters
Ottawa 4, Ontario
10 May, 1968

②

Dear :

②

Your letter dated 2 May, 1968 concerning an unidentified flying object (UFO) sighting reported approximately 5 July, 1962 is acknowledged.

Our records indicate that Canadian surface and air units participated in a training programme while en route from Bermuda to Halifax during the period 17 June to 30 June, 1962. However, the timing and general geographical position in question would suggest that the sightings made by the ② would not be associated with this training force. The sonar device found floating in the water containing the label "Royal Canadian Air Force" could well be one of the expendable sonar devices used during the training programme.

The "funny lights" which apparently made strange and rapid manoeuvres at low altitudes could not, in my opinion, be associated with the manoeuvres of either a helicopter or a fixed wing aircraft.

This Headquarters is unable to provide an explanation to these unusual aerial sightings.

N.W. Turner
Colonel
for Chief of the Defence Staff

058

②

Lt-Col Robertson
Directorate of Operations
CFHQ

Dear Lt-Col Robertson:

Enclosed is the letter I mentioned over the phone the other day. There is a fair amount of detail about the sighting. Could you tell me if there was any Canadian Air Force or Navy exercise in the general vicinity at the time. The exact location is vague and I realize that that may make it difficult to pinpoint. However if there were an exercise at that time and in the general vicinity it would then likely be an acceptable answer.

There is no big rush on this request. Thank you.

Yours sincerely,

②

CASE # 337-C (Please refer to
code when you reply).

RE VEDMAR 27 1962.

(2)

NG JULY, 1962.

For the UFO expert was related to A
assistant scientist of the P. Gold Corp. who
sets. (2) met him during his
usson. He at net. (2) February 1962. (2)
sity and his signal. (2) and about the UFO subje
had been interested in gravitation theory, es
regards of propulsion, as well as electromag
(2) came to me to talk about this aspect of the phenomenon.
Later, on March 20, a complete sighting interview followed at my
apartment.

In the summer of 1962 (2) was living at the
home of his parents in (2) friends of (2) family.
to be the mail their 60-foot yawl (2) from Bermuda
Nova Scotia for an overhaul. The crew for the seven-day voyage
sisted of (2)

(2) remembers it, the (2) left Bermuda toward
the end of June, 1962. The cruise was to be far from uneventful.
On the second day out, the yawl was lashed by a surprise hurricane
with 75-mile-per-hour winds and 40-foot waves.

The UFO sighting, (2) recalls, happened very soon after
the fourth of July--possibly the morning of the 5th. The boat had
crossed the Gulf Stream and was some 200 miles or so from the
mainland. (2) and another crew member were standing watch
on the "graveyard" shift (midnight to 4 a.m.). The sky was mostly
clear with scattered clouds. There was a very low wind of perhaps
three to five knots, and the yawl was heading almost due north at
about seven knots.

Around the middle of the shift ("probably 2 a.m."), (2) and
his companion noticed some "funny lights" in the distance on the
bow. They appeared to be quite low for conventional aircraft and
were performing strange, rapid maneuvers. The lights numbered about
four or so. Each object would mill around within the group and then
one or two of them would dart rapidly away from the formation on a
horizontal path, covering perhaps 10 to 20° of azimuth. This ma-
neuver was shortly followed by an equally rapid return to the group
along the same path. This darting back and forth was done repeated-
ly during the observation. Sometimes, Mr. (2) recalls, the mov-
ing object angled down slightly in flight then back to its original
altitude.

All that could be seen of the UFOs was each object's light
which seemed to rotate and change color from red to orange. (2)
(2) felt the light was either on the top or bottom of an unseen

060

craft. At intervals a brilliant, very narrow, bluish-white searchlight beam shot out at a 45° angle from what seemed to be the fuselage area of the UFOs, striking the surface of the ocean. When asked about height and distance, (2) was uncertain but estimated the former at 50 to 200 feet above the ocean and the latter at 100 to 1000 yards. The UFOs were silent.

The two witnesses woke the others, and everyone came out on deck to watch the strange sight. Occasionally one of the objects moved toward the boat--but never close--and then returned as before to the formation. (2) feared if the objects were aircraft on some sort of low-level exercises, the planes might not see the yawl. So he turned a flashlight on the sails for a while. (2) remembers everyone was "nervous" and he was "scared." He felt the objects could have seen the illuminated sails and yet they kept their distance, which eased everyone's fears. I asked (2) if anyone observed the UFOs through binoculars. He thought someone must have, but he couldn't be certain of this.

The eight persons aboard the (2) continued to watch the lights and their odd maneuvers until shortly before sunrise (4-4:30) when the lights went out or vanished in the distance, (2) recalls, one or two at a time.

Later that morning, after (2) had gone to bed, the crew found a sonar device floating in the ocean. It was bristling with antennas, labeled "Royal Canadian Air Force," and had apparently been dropped from an aircraft. (2) was called upon to examine it so he took it apart and found a microphone inside used for echo-sounding submerged targets. With the discovery of the sonar device, everyone now assumed the lights seen at night were connected with military exercises. This theory appeared to receive further support when the (2) arrived in port at Lunenburg, Nova Scotia. Ships of the Atlantic fleet had recently arrived at Halifax following maneuvers at sea. The sighting was soon forgotten.

However, over the years (2) was bothered by the fact that there were no ships visible at any time during the sighting and the hovering-darting antics of the objects precluded jet aircraft. Helicopter activity didn't seem to fit either since the objects moved too quickly from place to place, maintained an almost constant distance from the boat, and were nowhere near any ships (no ships were seen that morning). If it had been a search-and-rescue operation, the yawl should have easily caught up to the search craft.

When (2) returns to New Jersey, he will try to elicit additional details about the sighting from (2) and perhaps have him write me.

(2) he conducts basic research for his firm.

This investigator believes witness (2) account is an honest description of a UFO sighting told to the best of his recollection

061

of events occurring six years ago. In my opinion, the rapid maneuvers of the reported objects and searchlight activity take this account out of the "DL" category ("Damned Lights," a term first coined by this investigator for reports of nondescript lights in the sky) and place it in the UFO classification. The only conventional aircraft that could be confused with the observed lights are helicopters, and this explanation, in my judgment, doesn't quite measure up for the reasons cited above by the witness. Supporting testimony by ② would be very helpful, and it is hoped his description will be forthcoming.

Naritime Air Command Headquarters,
5217 South Street,
4 abfax, N.S.

Dear Sirs :

I would like to inform you that I saw a strange object in the sky
the late evening on March 25, 26, 27, 29 and 30.

At around 10:45 it would first appear and by 11:00 it was about 30°
p from the horizon. It was almost directly Northeast from New Germany.
It appeared to be a flickering red light, very bright, and had several
small pinpoints of red light around it. It sometimes appeared inside an
elliptical mass of glowing red gas-like light. It also moved from
side to side and up and down slightly and seemed to throw out showers
of sparks when doing this.

As the evening progressed, it moved higher up in the sky (probably
since the earth turns around), making it seem to hold ~~the~~ one position
but move slightly ~~also~~ around in it.

I was unable to see it on the evenings of March 28, 31 and April 1 because
the sky was clouded.

If you have any information on this, would you please inform me what
it is if you know, or if you think it is a U.F.O.

REPORTING OF FIREBALLS, METEOR SHOWER, AND UNIDENTIFIED FLIGHTS

GENERAL

1. The National Academy of Civil Associate Committee on meteorites coordinates reports of sightings of falling meteors and periodically launches a publicity campaign to enlighten the Canadian public. All members of the Canadian forces located in North America can assist this activity by reporting any such sightings.

2. The National Research Council, Radio and Electrical Engineering Division is the recognized governmental agency responsible for investigating such reports. The observer is requested to assist this by carrying out field type investigations.

DEFINITIONS

3. A fireball is a bright meteor with a luminosity which equals or exceeds that of the brightest planet. It is usually seen moving rapidly across the sky and sometimes a trail of glowing particles is left behind. The meteor may explode with a burst of light and a loud sound; this may happen several times during a single fall.

4. A meteor shower can be defined as an unusual series of sightings which the observer is unable to explain.

PROCEDURE

5. Whenever a sufficient number of fireball observations are obtained over an area 100 miles or more, it becomes possible to combine the observations and predict the next probable shower which meteorites associated with the fireball may have reached the surface of the earth. Since freshly fallen meteorites are of considerable interest to all Canadians, all sightings should be reported as soon as possible.

6. Unclassified priority messages shall be referred to HQ CANAD with information copy to the addresses indicated in para 7. The first words in the text shall be "FOR HQC." All reports shall include as much of the following information as is relevant, using the identifying letter indicated:

- a. Date and time of sighting (UT shall be used).
- b. Condition of sky (clear, cloudy, haze, etc.).
- c. Location of observer (either precise position on ground or astronomical reference).

- D Occurrence of bursts (number and approximate positions along path).
- E Luminosity (brightness compared to planets or moon and occurrence of shadows cast by nearby objects, if any).
- F Colour (distinguish between colour of fireball and any persistent train or trail after passage of fireball).
- G Form (size in relation to moon and shape).
- H Duration (both of fireball in motion and persistent train or trail in the sky).
- I Sounds (description of sound and time interval between sighting the fireball and hearing the sounds).
- J Position in sky (positions of beginning and end of fireball path, both azimuth and elevation).
- K Any other unusual observations.

7. In addition to the report to Canadian Forces Headquarters an information copy shall be transmitted by routine precedence to the regional representative in the area of the sighting. The regional addresses are as follows:

Maritimes	Dr. R.E. Corviller St. Francis Xavier University Antigonish, N.S.
Quebec	Mr. Wm. A. Warren 30 52nd Avenue Bachins, N.B.
Ontario	Royal Astronomical Society of Canada 252 College Street Toronto 2B, Ont. Meteor Centre National Research Council Ottawa 2, Ont.
Manitoba	Prof. R. Leith University of Manitoba Winnipeg, Man.
Saskatchewan	Mr. John V. Hodges 1554 Elphinstone Street Regina, Sask.

Alberta

Prof. H. H. Collinsbee
University of Alberta
Edmonton, Alta.

British Columbia

Dr. J. L. Lawson
University of British Columbia
Vancouver, B.C.

8. Reports shall be reported by priority message addressed to Vancouver with an information copy addressed National Research Council for Radio and Electrical Engineering Division. The first word in the text shall be "for SFOC and ... report". All reports shall include as much of the following information as is obtainable, using the identifying letter indicated:

1. Date and time of sighting (if any).
2. Visibility (fog, clear, cloudy, haze, etc.).
3. Identification of observer.
4. Location of observer at time of sighting.
5. Identification of other persons also observing the UFO.
6. Description of sighting (shape, colour, altitude, movement, duration of sighting, etc.).
7. Direction of observation.
8. Any other relevant information.

9. It is not necessary for the observer to make an identification between a "fireball and meteorite observation" and a UFO. Unusual aerial sightings which are not identified are to be reported as UFOs.
